

Supplementary Table S1. Summary information about huts recorded at Horse Paddock 1, Hamilton Creek Paddock 1, Bellevue Paddock 2 and Cooramarina Creek 1.

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
Horse Paddock 1									
1	9.13	3.75	11.04	60° (north east)	Mussel shells and stone artefacts, broken glass.	absent	~14 large rocks > 10 cm. Fairly clear interior with diffuse boundaries and walls difficult to define. Wide entrance facing close to wind direction. Clear heath against backwall on exterior (opposite entrance). Stone artefacts scattered throughout wall.	3 – thin patch of clear ground	nil
2	4.8	2	3.14	320° (north)	Glass fragments (thick, light green) and clear glass fragments, nail, silcrete and chert stone artefacts, charcoal fragments, mussel shell fragments.	absent	Walls very diffuse and difficult to define. ~18 rocks >10 cm. Raised walls (possibly from erosion). East wall has become merged with neighbouring hut. Entrance difficult to identify – recorded is an estimate.	2	nil
3	4.5	1.8	2.54	50° (north east)	Stone artefacts (fine, exotic white chert),	present	~60-70 rocks > 10 cm. Small and narrow entrance. Quite diffuse margins with hard to	2	n/a

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
					metal rivet, white button, thick white ceramic with glaze and blue flowers, fencing wire, fragments of mussel shells, nail, buckle.		define edges. Stone artefacts scattered throughout the walls. Clear entrance.		
4	5.3	1.7	2.27	350° (north)	Two tin matchboxes, metal thread, small piece of ceramic, glass fragments, fencing wire, stone artefacts (silcrete and fine chert), mussel shell scatter.	absent	Part way down the ridge towards the creek. Fairly diffuse boundaries with hard to define edges. Small number of large rocks, ~14 large rocks >10 cm. Fire retainer heath on north exterior edge.	3	nil
5	5.8	2.2	3.80	335° (north west)	Buttons, green glass, clear glass, black glass, buckle, bone fragments, stone artefacts.	present	Quite diffuse, edges spread out. ~46 rocks >10 cm. Large rocks making up the wall, some appear to be collapsing inwards (eastern wall). Western wall merges with Hut 2. Eastern side has lower elevation with erosion around the edge. Couple of wood pieces scatted	2	n/a

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							within, along with bone. Artefacts spread around entrance.		
6	5.6	2	3.14	330° (north north west)	Shell button, clear glass, fence wire, bone fragment, medium shell fragments, big silcrete stone artefacts, charcoal fragments, tin can and glass stopper.	absent	Faces creek and low on the slope. Fairly clear but somewhat diffuse. Not many big cobbles. The gibber forms a slight mound and is on the edge of the water flow (North side) ~14 >10 cm rocks.	3	nil
7	6	2.3	4.15	350° (north)	Buttons (metal and bakelite)(?), horseshoe, fencing wire, shell fragments, stone artefacts, clear glass, metal match boxes, bone fragments, white ceramic with blue leaves.	present	Faces creek and part way down the slope. Fairly clear with lots of associated stone artefacts (focused out the front). Medium stone cores within the wall. The entrance is difficult to define. ~30 >10 cm rocks. Ashy part inside the wall. Lots of shell (on the north side) and bone fragments.	4	n/a

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
8	5	2.8	6.16	120° (south west)	Piece of metal, mussel and snail shells, stone artefacts.	absent	Water flow on the south end. Further on the higher point. Mostly comprised of small gibber and ~12 stones larger than 10 cm. A very distributed/disturbed site and the wall boundaries are difficult to define. They are not raised. There are two groups of raised rocks on the south end and northeast wall. The opening is thought to be on the south-west. The internal area is not clear and covered by small gibber.	5	nil
9	5.6	1.6	2.01	355° (north)	Fragments of clear glass, stone artefacts (local silcrete, one hematite retouched flake), fencing wire, button made of shell with four holes, purple (solarised) glass.	absent	Near top of the ridge. Entrance is difficult to define, thought to be facing north. There is a raised area of stones on the southwest side along with the east side. The centre is not very clear. ~30 stones >10 cm.	4	nil
10	5.2	1.9	2.84	325° (west north west)	One rusty can, one light green fragment, charcoal, shell fragment, large	absent	Near road and fairly high on the slope. Clear and well define walls, quite high. Walls contain stone artefact. ~37 stone >10 cm.	2 - clear 'C' shape	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
					silcrete stone cores (in wall), silcrete stone artefacts, thin piece of wire, bone fragments and metal buckle (?).		Small internal area. Cattle track on west side. Fire retainers/hearth in front of entrance.		
11	5	2.3	4.15	330° (north north west)	Two flaked glass pieces, shell fragments, bone fragments, silcrete stone artefacts, belt buckle.	absent	Fairly high on ridge. Fairly well defined walls with a slightly diffused entrance. ~50cm stones >10 cm.	2	nil
12	5.7	2.8	6.16	0° (north)	Shell fragments, metal knife, piece of glass, purse frame, stone artefacts.	present	~29 large stones >10 cm with dispersed smaller ones. Larger rocks are loosely scattered in an arch with smaller rocks dispersed around the 'wall'. Clear opening with shell and glass scattering of shell and glass shards on left hand side of entrance.	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
13	4.7	2.5	4.91	330° (north west)	Glass piece, animal bone (assumed), piece of pipe, plastic button, two metal buttons, stone artefacts.	absent	Located on higher point. Distinct shape made with larger stones on northeast to south side. There is a slope on the southern end. Small gibber is spread around the east, south and western edges. The larger rocks appear to have collapsed inwards. ~75 rocks >10 cm.	2	nil
14	5.05	1.8	2.54	10° (north)	Iron nail, ~2cm glass pieces, piece of metal, minimal shell fragments, stone artefacts.	absent	~100 large stones > 10 cm. Wide spread of small gibber making the 'walls' appear wider similar to Hut #15. Southern end appears higher. Larger stones appear collapsed into centre.	2	nil
15	3.78	1.5	1.77	310° (north north west)	Stone artefacts and no European artefacts.	absent	Located on more raised section of land. Water flow appears to be on the east side. Entrance is difficult to determine, thought to be NNW. Mostly small gibber (1-3 cm) and ~36 cm stones > 10 cm. Larger stone on the southern and north eastern end and smaller even gibber spread around with a clear internal area.	2	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
16	4.35	2.6	5.31	160° (north east)	Stone artefacts.	absent	~18 large stones > 10 cm with smaller gibber. Very dispersed boarder, almost no external diameter visible. Internal area clear. Opening difficult to determine, thought to be northeast side.	3	nil
17	4.9	3.4	9.08	173° or 342° (south or north)	Ceramic and tin located about 1.2 metres away.	absent	Mostly small gibber with occasional (~6) large stones >10 cm. External edge of hut difficult to determine, quite dispersed, especially the northern end. Entrance difficult to determine, could be north or south. Interior area mostly clear, some vegetation and small rocks.	3	nil
18	4.3	2.56	5.15	220° (south)	None – tin and ceramic between Hut 18 and Hut 17.	absent	Located on raised section. Water flow visible on southeast side. ~12 stones >10 cm and mostly small stones 1-3 cm. Not a clear entrance, possibly facing south (which is not common). No large stone boarder and not as built up as other huts, thought to be older than the other huts.	2	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
19	4.2	1.9	2.84	340° (north)	Piece of metal.	absent	~52 rocks > 10 cm. South east section of wall is slightly higher than rest of the circle. ~30 cm area around hut which might have been clear but now covered in small gibber.	4	nil
Hamilton Paddock 1									
1	2.9	1.5	1.77	210° (west south west)	Stone artefacts around the feature, mostly silcrete. One piece of chert.	absent	Quite diffuse and entrance difficult to define (~1.5m wide) on east side. Hut wall thickest on north side. ~18 rocks >10 cm. Defined by clear centre. No artefacts visible inside feature.	3	nil
2	nil	2.55	5.11	nil	Silcrete flake inside hut structure.	absent	Hut very diffuse, only defined by clear patch in centre. ~24 rocks >10 cm. Cannot define entrance. Possibly southern side. Red staining on some rocks – natural weathering? Evidence of erosion flow northwest and southwest.	5	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
3	2.5	1.45	1.65	220°-45° (west - north east)	Flaked stone artefacts in the area, not associated with the hut.	absent	Mostly small gibber and ~50 rocks 3-10cm and 1 rock 15cm in diameter. Extremely disturbed by cattle. Only about 50% of northern hut still intact. Central area is clear of gibber stone. Hut boundary is marked by semi-circle of small gibber.	3	nil
4	nil	3.4	9.08	nil	None.	absent	Largely clearer area but no clear exterior boundary. ~14 rocks >10 cm and mostly small gibber creating the boundary. Evidence of water flow from north to south through hut. Slightly raised on the east side. No discernible entrance due to cattle track.	3	nil
5	nil	2.2	3.80	45° (north east)	Possible grindstone.	absent	Very dispersed with evidence of water flow through the centre (NNE to SSW). Cattle tracks northeast to southwest (30°). ~5 medium sized rocks (~5-8cm) also a collection on the north side and ~6 rocks >10 cm. Clear internal area.	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							Possible interior wall but no exterior wall boundary. Slightly raised on northeast edge. Slightly raised area on southwest that continues to the south for 1 m.		
6	nil	1.8	2.54	nil	Stone artefacts consistent with surrounding artefact scatter.	absent	Not very clear, possible hut in poor condition. Recorded on the basis of the largely clear central area and apparent distinguishable wall on south side. Not many large rocks, very few in 'wall' but mostly small gibber. Cattle pad is running through the centre of the hut north to south, causing disruption.	5	nil
7	4	2.4	4.52	nil	Stone artefacts consistent with surrounding artefact scatter.	absent	Poorly preserved with a cattle pad running through it. Essentially only gibber 'wall' with occasional large rocks in the wall. Central area is clear of gibber stones and there are tufts of grass growing within it.	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
8	3	1.5	1.77	230° (south west)	Stone artefacts (flakes) of silcrete and chert.	absent	Water or cow track on the west side of hut and one 2 m on the east. ~22 rocks > 10 cm, small amount of medium gibber and mostly small gibber. Hut has a visible interior and exterior wall edge. Not a very clear entrance, believed to be southwest. Interior area clearer of small gibber.	2	nil
9	4.9	2.4	4.52	300° (north west)	Silcrete stone artefacts, fragment of weathered wood (9.5cm long).	present	Close to creek, evidence of water flow and cattle presence. ~43 rocks >10 cm, some medium gibber and mostly small gibber creating a defining boundary. Large stones create an arc being slightly raised on the east and south sides (possibly from water flow). Distinct hut outline and a clear entrance. Cattle track on the eastern side. Interior is clear and appears larger than surrounding huts. Large concentration of flakes, possible knapping floor at southern end.	2	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
10	3.5	1.47	1.70	268° (west)	One flake.	absent	Hut has a clear border which is slightly raised with the larger rocks on top of small gibber. ~29 rocks >10 cm, medium gibber (~5-8cm) and small gibber. Higher on northeast side. Larger collection of large rocks on northeast side. Interior area is clear of gibber. No easily visible entrance, possibly west.	2	nil
11	nil	1.8	2.54	10° (north)	Stone artefacts – silcrete and chert flakes.	absent	~8 rocks >10 cm, few rocks ~8 cm and the rest small gibber. More rocks ~8cm on the west side, slightly higher outer exterior. No exterior border visible, blended out with small gibber. Entrance not very clear, possibly north side.	2	nil
12	4.2	2.1	3.46	190° (south)	Some silcrete artefacts scattered. One tiny chert flake.	absent	Located on gibber strip edging the creek bed. Feature is fairly diffuse, defined by clear centre with slightly raised wall and partially clear circle outside the wall. Northeast wall section is clearest. External boundary difficult to define, wall thickness taken from	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							northeast. Entrance difficult to define.		
13	nil	1.5	1.77	330° (north west)	Stone artefacts – quartz, chert scrapper, silcrete.	absent	There is no defined exterior border only a clear interior area surrounded by small gibber. ~7 rocks >10 cm, the rest small gibber.	3	nil
14	nil	1.34	1.41	nil	Stone artefacts – silcrete flakes, core.	absent	Hut has a somewhat clear circular base. Small gibber scattered inside. Is surrounded by occasional clear patches probably from water flow. Semi-circular border created by small gibber topped with larger rocks. ~23 rocks >10 cm and small gibber ~2 cm. No discernible doorway, could be north or south.	3	nil
15	3.6	1.8	2.54	140° (south east)	Silcrete flakes around exterior.	absent	Very diffuse and difficult to define. Mostly identified by the lack of rocks in centre circle. Entrance difficult to define. One of the most remote huts. ~20 rocks >10 cm.	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
16	nil	2.7	5.73	290° (north west)	None.	absent	Very dispersed hut with only the clear internal area visible from small gibber. ~8 rocks >10 cm and the rest is small gibber. Small gibber makes up the boundary and extends outwards with no clear termination. Entrance is unclear, possibly northwest or it could be from water flow. Cattle track running roughly north to south.	3	nil
17	3.5	1.5	1.77	164° (south)	Small number of stone artefacts.	absent	Cattle track running east and west of hut joining in the north. Creates clear exterior boarder. ~18 rocks >10 cm, mostly medium gibber at the northern end and small gibber. Wall is more raised with medium gibber than surrounding ground. Interior floor is mostly clear of stones. Entrance possibly at the southern end. Medium gibber in the northern end appears to collapse outwards.	2	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
18	3	1.9	2.84	10° (north)	Flakes.	absent	~13 rocks >10 cm but mostly small to medium gibber. Semi clear interior with small gibber dispersed into it creating rough edges. Slight exterior boundary visible in certain areas. Entrance is possibly thought to be north, but not certain. West side has a more defined border	4	nil
19	4.5	2.4	4.52	230° (south west)	Stone artefacts.	absent	Very disturbed hut site from cattle and water. The interior floor is concave probably due to water pooling, creating mud. Vegetation is growing inside of it. Exterior boundary is difficult to determine in most areas. Small and medium gibber dispersed around it. Mostly medium gibber ~5cm and ~12 rocks >10 cm.	5	nil
20	nil	2.1	3.46	0° (north)	Stone flakes and cores.	absent	There are no raised walls only a clear internal area. ~6 rocks >10 cm and ~18 rocks ~8cm and the rest smaller dispersed gibber. A slight possible exterior border	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							due to water flow. North to south cattle track.		
Bellevue Paddock 2 and East 2									
1	nil	1.7	2.27	340° (north west)	None.	absent	~50-70m from creek (east). ~33 rocks >10 cm interspersed with medium gibber and small gibber. Poor condition hut with a faint edging of larger and medium rocks forming a wall (east, south and west). Entrance appears to be northwest. Smaller gibber has spread into internal area so only a small clear area is visible. No clear exterior boundary and large rocks appear to collapse into hut.	2	nil
2	nil	2.3	4.15	nil	None.	absent	~27-30 rocks >10 cm with medium and small gibber. Hut with a more defined raised wall section, especially on the west side. Located closer to the creek on low lying land. No clear external border but large and medium rocks provide a slight impression of edges (not enough	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							for measuring). Entrance is not clear enough, only two openings NNE and SE. Internal area has evidence of water pooling.		
3	1.75	1.55	1.89	130° (south east)	Two slugs of stone tula adzes.	absent	~35-40 rocks >10cm and a large amount of medium and small gibber fill. Hut is quite raised, especially east and west walls with large and medium gibber. External edges were determined by the large rocks. Appears more oval than circular and the opening is thought to be southeast. East side appears to have a section of small gibber between the wall section. Clear internal area with small gibber spreading from wall into the centre.	2	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
4	3.7	2	3.14	310° (north west)	Stone artefacts – chalcedony flake, chert (slightly more than huts 1-3).	absent	~55 rocks >10 cm with medium and small gibber. Has a clear wall of large rocks. Interior area is lightly covered with small gibber. Entrance is thought to be roughly north with a larger number of stone artefacts scattered by it.	4	nil
5	3.6	2.1	3.46	0° (north)	Stone artefacts including chert flakes and silcrete artefacts on the west side. Seven pieces of grindstone fragments.	absent	~65 rocks >10 cm. A very unique hut due to the presence of what appears to be a rock pile in the centre of the hut. The spot appears to slope north/north east and ~2m away there appears to be a cattle track. More rocks in the larger centre pile than around the wall edges which are more medium and small rocks. Southern wall appears more built up. Appears to be a larger entrance (possibly from washout) with grindstone fragments outside.	4	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
6	nil	1.7	2.27	33° (north north east)	None.	absent	<p>On a slight ridge. ~25 rocks >10 cm and the rest mostly small gibber. Very diffused with a few large rocks which form an arc (and a rough internal border). The spread of small gibber makes an external border difficult to determine and goes in to cover most of the internal floor. Entrance could be north facing. Possibly a larger stone circle around the outside, possibly for law men/women only (Pearl pers. comm. 2021)</p>	5	nil
7	nil	2.5	4.91	310° (north north west)	Stone flakes.	absent	<p>~28 rocks >10 cm. Hut is more oval in shape with a raised west side of larger rocks. The borders are on the south, east and north side, mostly medium gibber. Internal area is clear though small gibber infiltrates the centre. It is on the edge of an erosion gully, mid-way up the slope. Gully to the north and creek to the east.</p>	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
8	nil	2.26	4.01	nil	Stone artefacts.	absent	Hut 7 to the southwest. ~28 rocks >10cm with medium gibber mostly on the west side and smaller gibber on the east side. Not very clear exterior edges but clear internal area. Larger stones on the west side which is also the highest section of the wall. Wall separation between Hut 7 and 8 is unclear and mostly small gibber. The area between the hut centres is about 2m apart.	3	nil
9	nil	1.6	2.01	nil	Minimal stone artefacts.	absent	~9 rocks >10 cm. Very diffuse boundary, only internal are visible. Exterior is all spread out. East wall appears more intact with medium gibber and larger stones occasionally on west side. Not many large stones and entrance not visible.	3	nil
10	2.85	1.4	1.54	10° (north)	Very few artefacts, four stone artefacts inside hut space.	absent	Low down, near base of the rise, close to creek flat. ~11 large rocks >10 cm. Hut fairly diffuse but can make out low wall and clear central area. Entrance a bit hard to make	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							out, could possibly be on north side. Larger collection of rocks on north west and a smaller pile on the north east.		
11	3.1	1.7	2.27	350° (north)	A couple of stone artefacts (3 flaked artefacts within hut – including 1 chalcedony tula slug). One retouched truncated piece with possible embedded potlid (grey silcrete) – possible engraver.	absent	North side of gully ~26 large rocks >10cm. Fairly diffuse, entrance difficult to determine and could be up to 40°. Fairly certain this is a hut, as large cobbles form wall around clear, sandy circle.	2	nil
12	nil	1.4	1.54	0° (north)	None.	absent	Fairly well defined, discrete hut, low wall. Centre is covered in small pebbles. Some large rocks in centre. Entrance a little difficult to define. ~33 large rocks >10cm. External edge of wall difficult to define, internal clear from the larger rocks.	4	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
13	nil	1.95	2.99	nil	Minimal stone artefacts.	absent	Not as clear, there is a raised section on the N-NE section. The larger rocks are more on the east side. ~28 large rocks, lots of medium gibber and small gibber spread throughout. Medium gibber makes up most of the boundary wall with small gibber scattered throughout. There is a clear internal area, and the entrance is not clear. The external boundary not discernible because it has spread out, appears to be a slight ring of medium gibber. There appears to be a cattle track through the middle (N-S).	3	nil
14	3.1	1.7	2.27	250° (west)	Minimal stone artefacts – core (2x in wall), flakes.	absent	No clear interior area (a couple of visible patches), it is covered in small gibber. There is a visible wall base of large and medium rocks (more visible on the east side). ~30 large rocks, small gibber spread evenly throughout, medium gibber makes up wall. The exterior area is covered with small gibber (smooth from being pressed into the ground) but the	4	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							exterior edge is visible in the larger rocks. There appears to be a cattle track on the far east side. Entrance possibly west		
15	nil	2.2	3.80	nil	Minimal stone artefacts.	absent	~16 large rocks. Very diffuse, there appears to be an internal and external border made up of mostly medium gibber and small gibber. Cannot identify a doorway. Has a small somewhat clear internal area, not perfect circle or oval and has small and medium gibber scattered inside. Wall not obviously raised.	3	nil
16	nil	1.5	1.77	340° (north north west)	A small number of silcrete stone artefacts inside and around hut, but not as dense as at some other sites. Several artefacts of blue-grey chert, including one tula adze, that were all	absent	~37 large rocks >10cm, low wall made of local cobble. Hut if fairly clear – East wall (uphill) well defined but west wall more diffuse – west wall may be more exposed to flooding. Bare sandy centre. North side of creek is flat, near base of gentle rise that leads to a small hill. Around east side: collection of 14 flakes all from one piece of rock,	2	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
					produced during a single reduction event.		tula (not a slug) from the same reduction event, though this could not be conjoined. Hut a bit oblong in shape.		
17	2.9	1.25 E-W / 90 N-S (1.075)	0.91	280° (west)	Stone artefacts scattered in the wall area and on the outer side of the small gibber 'path'.	absent	~23 rocks >10 cm. This hut is more oval with a clearer wall boundary of mostly medium gibber with a spread of larger rocks. The smaller gibber has been pressed into the ground on the inside and outside (around the hut) to make a smoother looking area. There is a clear opening towards the west and the east wall in not as clear as the north and south. There is more of a raised edge on the north wall. Slight raise on south east wall from rock build up.	4	Nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
18	3.5	1.5	1.77	290° (north west)	Small number of chert stone artefacts scattered in wall area, including one large tula adze (approx. 3 cm long).	absent	<p>Appears to be surrounded by a water flow area, clear ground to west towards creek (~75 m away). *Possible stone arrangement north of hut.</p> <p>This hut has lots of large rocks which form a 'c' shape with a clear opening. The large rocks (~70 >10cm) appear to be on top of smaller gibber.</p> <p>There are more large rocks on the northern wall. They seem to have collapsed into the internal area.</p> <p>The edge of the external boundary is visible but spread with smaller gibber (Clearer on north side).</p> <p>There is an oval clear patch internally.</p>	2	nil
Cooramarina Creek 1									
1	5.55	3.9	11.95	35° (north east)	Small stone artefacts of chert, silcrete and mudstone (flakes, core, three tulas), mussel shell fragments.	present	<p>On western side of gully.</p> <p>Internal floor of hut clear, edges of wall difficult to determine.</p> <p>Slope to the east.</p> <p>Water flow out of the entrance.</p> <p>Wood fragment disintegrating on the side.</p> <p>~30 rocks >10 cm.</p>	4	115 ± 25 (surface wood)

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
2	2.7	1.6	2.01	340° (north)	Stone artefacts.	absent	Located on western side of gully on the top of the present day rise. Facing the creek. Fairly dispersed with a clear internal floor area. ~48 rocks >10 cm.	4	nil
3	4.8	2.2	3.80	310° (north west)	Mussel shell, stone artefacts.	present	~150-200 m from creek in the middle of the slope. Mostly comprised of large cobbles >10 cm (~100) with small gibber around the outside. Very strong and distinct hut boundary and walls. Water flow around the edge of hut creates a clear area around the hut. East wall collapsed outwards. Erosion washed the surrounding area out. Large amount of collapsed wood in the inside ranging from ~50 cm to ~180 cm in length.	1	270 ± 20 (surface wood)
4	3.9	2	3.14	300° (west north west)	Intact shell, large silcrete flake, stone artefacts.	present	Located on east side of erosion gully. Erosion left hut site raised. ~50 rocks >10 cm (silcrete, breccia, ironstone). Very good condition with preserved organic material in the	1	195 ± 25 (surface wood)

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							centre of the hut. Noticeable entrance.		
5	7.5	2.1	3.46	0° (north)	Stone artefacts, couple of mussel shells under collapsed wood.	present	Located on higher part of slope. Largest hut in the complex. Collapsed wood is in the centre and internal floor is higher compared to present floor location (probably due to erosion). Very clear mound visible. Mostly comprised of large rocks >10cm with smaller gibber scattered around northern end (~100+). Clear patch on the northern edge with no collapsed wood. No visible entrance, presumed to be northern end. Area under collapsed wood appears clear.	1	215 ± 25 (surface wood B)
6	3.1	1.6	2.01	300° (west north west)	Stone artefacts of raw materials including silcrete.	absent	Located on east side of erosion gully. Fairly clear hut boundaries with dispersed boundary on west side where erosion gully cuts into it. Sediment build-up on south side. ~50 rocks >10 cm forming the 'C' arc.	4	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
7	4.6	1.8	2.54	10° (north)	Stone artefacts, snail shells.	present	Visible hut with collapsed wooden superstructure on the eastern side. Eastern side is also high up (possibly new hut due to presence of wood) or clearer area. Large rocks under collapsed branches. Mostly clear internal area towards west side (no collapsed branches) and water flow around the exterior of the hut. East and west edges contain more stones >10 cm (~39). Visible opening facing north (not with collapsed branches).	1	220 ± 25 (surface wood)
8	nil	2.9	6.61	180° (south)	Stone artefacts.	absent	Very diffuse, no clear external boundary (slight visibility on western side from larger rocks). ~11 rocks >10 cm, the rest of the area is covered in small gibber. Entrance possibly on southern side. Water flow on east side into Hut 9.	3	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
9	3.4	1.65	2.14	100° (east)	Stone artefacts.	absent	Very diffuse boundary and unclear entrance. Furthest up the slope from the creek. Has a clear central area. Large rocks fall outwards ~26 rocks >10 cm and the rest of the hut (main portion) is small gibber. Water flow appears to be west to east through the hut.	2	nil
10	nil	1.7	2.27	0° OR 250° (north or north west)	Stone artefacts including cores.	absent	Closer to the creek on a slightly higher part of the slope. ~60 rocks >10 cm which form the walls with small gibber underneath larger rocks and dispersed around and inside. On the southern end only partial walls visible. Entrance is difficult to determine, possibly north or northwest. Only internal area taken due to unclear exterior edge.	2	nil
11	nil	1.85	2.69	0° (north)	Stone cores and flakes, mostly silcrete.	absent	Creek ~20 m away ~58 rocks >10 cm covering small gibber. Hut is very diffuse, slight outline on the south, southwest and south east with large rocks. The large rocks carry on	4	nil

Hut No.	External diameter (m)	Internal diameter (m)	Interior Area (m ²) – based on radius	Orientation	Associated Cultural Material	Surface wood (present/absent)	Description	Type	Radiocarbon Age/s (BP)
							southwest then north and south, similar to a ridge line. The large rocks appear to have collapsed outward. Unclear exterior outline with small gibber covering the internal area.		
12	3.8	1.8	2.54	13° (north)	Fairly large amount of stone artefacts including large and small flakes, cores, grindstone fragments, one chalcedony tula adze (utilised) and one slug of a chalcedony tula adze.	absent	Low on slope near edge of gidgee lined creek bed. On east side of erosion gully. ~31 rocks >10 cm. Southern side is clearer, and the entrance is visible on the north. Clear internal area with a few pebbles. Area of intensive knapping to the east.	2	nil
13	3.2	1.5	1.77	320° (north north west)	Large number of stone artefacts, mostly of local silcrete but also of white chalcedony, including flaked artefacts and grindstone fragments.	absent	Low on slope near edge of gidgee lined creek bed. On east side of erosion gully. East wall is well defined with large rocks ~30 >10 cm. The west side is very diffuse and difficult to define. Entrance was difficult to determine.	4	nil
